"If you can design one thing, you can design everything"
- Massimo Vignelli

About

I'm a product designer and Webflow developer. I have several years of experience working as an architect. I believe that the acquired skills and knowledge will be useful in my further design work in other areas.

In my opinion design encompasses various fields, but they all come down to designing experiences. It is a process that consists of understanding the problem, working with users, collecting ideas and implementing them. In this way, we follow the path from concept to finished product, with the goal of creating a design that provides the best user experience.

Skills

Interaction

User research
Sketching
Wireframing
Prototyping
User testing

Visual

Product Design
Interaction Design
Illustration
